

LEGAL OVERSEER

The AI Paralegal Built for Australian Law Firms

On-premises AI that drafts, researches and manages your matters end to end — deployed on your own server, so client data never leaves the firm. Every output is reviewed by an admitted lawyer.

THREE PROBLEMS EVERY FIRM FACES — SOLVED

- **Lawyers are buried in administrative work.**
Legal Overseer takes on intake, drafting, research, document chasing, file notes and billing prep — recovering 10+ hours per lawyer each week for fee-earning work.
- **Skilled paralegal capacity is costly and hard to find.**
It works every matter at once, around the clock, with the consistency of your best paralegal — and scales instantly as the firm grows, with no recruitment lag.
- **Cloud AI tools put privileged client data at risk.**
Legal Overseer runs entirely on your own server. Privileged material is redacted locally before any model call, so confidential data stays inside the firm.

THE SECURITY STORY

Security by architecture, not by promise. Legal Overseer is deployed on-premises on infrastructure you control — there is no shared cloud and no multi-tenant database. Privileged content is redacted locally before any AI call, backups are AES-256-GCM encrypted with keys you hold, and every action is written to an immutable, hash-chained audit trail. The result is a platform built for ASCR rule 9.1 and the Australian Privacy Act, with data sovereignty guaranteed by design.

PRICING

SMALL FIRM

\$15,000

per year
